14. Owner-only (SQL) tasks
15. FAQ & limitations

1. Overview & key concepts

Tournaments live in the **centre tab** of the bottom bar (the raised trophy button). Everything is organised in three levels:

```
Tournament  (e.g. "LUMS Sports Gala 2026")      - no sport of its own
   |__ Module  (e.g. "Men's Singles - Table Tennis")  - exactly ONE sport, ONE format
         |__ Entries (players or teams) --> Bracket / fixtures --> Results -->
Standings
```

Term	Meaning
Tournament	The whole event: name, description, organisation, location, cover image, dates, status. Created by the owner (SQL), not in the app.
Module	One competition inside the tournament (one sport, one format). Several modules can share a sport (e.g. Men's / Women's singles).
Entry	A competitor in a module — an individual, or a team/doubles pair. **Entries are added by admins only; there is no self-registration.**
Entry form	The set of fields collected per entry. Shared by all modules of a tournament.
Seed	An entry's ranking position used to place it in the bracket / groups.
Bye	An empty slot in a knockout round; the opponent advances automatically.
Walkover (W/O)	A match won because the opponent did not play.

The four formats

Format	How it works	Entries allowed
Single elimination	Lose once and you are out. Byes for non-power-of-two fields. Optional 3rd-place match.	2 or more
League (round robin)	Everyone plays everyone (1 or 2 legs). Points table decides the winner. Optional draws.	2–20
Groups + knockout	Snake-drawn groups play round robins; the top teams of each group go into a single-elimination knockout that the admin builds.	at least 2 per group, max 8 per group
Double elimination	Winners bracket, losers bracket and a grand final (optional reset match). You are out after two losses.	3–64

Participant types

- **Individual** — one person per entry.
- **Team** — a roster with min/max size and a lineup size. **Doubles = a team of exactly 2.** Each member has their own name, optional linked app profile, entry-form answers, captain flag and squad number.

2. Who can do what (roles)

Action	Owner (SQL)	Tournament admin	Module admin	Entrant	Any user
Create tournament, assign tournament admins	Yes	–	–	–	–
Edit tournament details & status	Yes	Yes	–	–	–
Edit entry-form fields	Yes	Yes	–	–	–
Create modules, assign module admins	Yes	Yes	–	–	–
Module settings, rounds, module status	Yes	Yes	Yes	–	–
Add/edit/withdraw entries, seed, generate bracket	Yes	Yes	Yes	–	–
Schedule, enter results, walkovers, reset	Yes	Yes	Yes	–	–
See private fields (CMS ID, phone, email)	Yes	Yes	Yes	own entry only	–
View published tournaments, brackets, standings	Yes	Yes	Yes	Yes	Yes
View **draft** tournaments/modules	Yes	Yes	Yes (their module)	–	–

> Tournament admins automatically hold module-admin powers in every module of their tournament. In the app you will see a small **ADMIN** tag if you are an admin and a **PLAYING** tag if one of your entries is linked to your profile.

> All permissions are enforced on the server. If you try something you are not allowed to do you will see “You don't have permission to do that.”

3. Finding and following tournaments (everyone)

3.1 The Tournaments tab

Tap the raised centre button. Filter chips: **Live**, **Upcoming**, **Past**, **Mine** (tournaments you administer or play in). Cards show the cover, name, organisation, location, dates and a status pill.

Status pill	Meaning
DRAFT	Visible to admins only.
UPCOMING	Published, no module running yet.
• LIVE	Published and at least one module in progress.
COMPLETED	Finished; read-only; champions displayed.
CANCELLED	Stopped; shows a Cancelled banner.

If the list fails to load, an error state with a retry appears. The list is cached for 30 seconds so revisiting the tab is instant.

3.2 Tournament page

- **Champions strip** — shown before the module list once modules have winners.
- **Module cards** — sport, format, entry count and module status.
- Gear icon (admins only) opens tournament management.

3.3 Module page tabs

Tab	What you see
Info	Sport, format, settings (best-of, legs, points, etc.), status, admins.
Entries	Participants with public fields (Name, School). Teams expand to show members. Admins also see private fields.
Bracket / Matches	Single/double elimination: the visual bracket (pinch/scroll). Leagues and groups: fixtures by matchday. Tap a match for the match sheet (teams, scores per game, venue, court, time, notes).
Groups	(Groups + knockout) group tables and group fixtures.
Standings	Knockout: ranks and a chart. League/groups: points table with form. Final ranks appear when the module completes.

> The bracket updates **live** (realtime, with a ~0.4 s delay) while you watch — no need to refresh.

3.4 If you are playing

Admins can link your app account to your entry. Once linked you get push notifications (section 11), a **PLAYING** tag, and the tournament appears under **Mine**. You can see your own private fields. Tell the admin your exact username if you want to be linked.

4. Tournament & module lifecycle

Tournament

```
draft  -->  published  -->  completed        (any state --> cancelled)
```

Tournaments are created as `draft`. Status is changed by an admin from tournament management (or by the owner via SQL). When **completed** or **cancelled**, nothing can be changed in the app.

Module

```
draft  <->  open  <->  seeding  -->  in_progress  -->  completed (automatic)
 any state except completed --> cancelled
```

Status	What it means	You can…	To move on
Draft	Hidden from the public	Everything	→ Open at any time
Open	Public; entries list visible	Add/edit/withdraw/delete entries, change settings, preview rounds	→ Seeding needs the checks below
Seeding	Entries frozen	Set seeds, (re)generate bracket, edit rounds, move entries between groups	→ In progress needs a generated bracket. Going back to Open **deletes** the generated bracket (confirmation shown)
In progress	Bracket locked, tournament is live	Schedule, results, walkovers, resets, withdraw entries	Completes automatically when the final (and 3rd-place match) is decided
Completed	Final	Nothing (owner can fix via SQL)	–

> A module inside a **draft** or **cancelled** tournament stays hidden/read-only regardless of its own status.

Checks when moving Open → Seeding

Applies to	Requirement
All modules	At least 2 active entries
Team modules	Every roster must be complete (min players reached)
League	2–20 entries
Groups + knockout	Group count and “advance per group” set; entries ≥ 2 × groups; max 8 per group; groups × advance ≥ 2; advance must be smaller than the group size (every group must eliminate someone)

Double elimination	3–64 entries; the 3rd-place match option must be **off**

5. Admin guide: setting up a tournament

The owner creates the tournament and assigns tournament admins (section 14). After that, tournament admins do everything below in the app.

5.1 Edit tournament details

Open the tournament → gear icon → **Manage**. You can change name, description, organisation, location, cover image, start/end dates and status. Publish when the entry form and modules are ready — before that only admins can see it.

5.2 Configure the entry form

Management → **Entry form** (fields screen).

Core field	Visibility
Name	Public
School	Public
CMS ID	Private
Phone	Private
Email	Private

- The five core fields are **locked**: they cannot be removed or made optional (“Core fields can't be removed.”).
- Add custom fields with a label, type, required flag and public/private flag. The internal key is auto-generated from the label; duplicates are rejected (“A field with this name already exists.”).
- Removing a custom field **archives** it — old values are kept.
- **Private** values are hidden from everyone except admins and the entrant themselves, enforced server-side.

5.3 Create a module

Tournament page → **Add module** (module form). Choose:

- Name and **sport** (fixed afterwards in practice — pick carefully).
- **Format**: single elimination, league, groups + knockout, double elimination.
- **Participant type**: individual or team (roster min/max, lineup size; doubles = exactly 2).
- Max entries (optional).
- Format settings: best-of per round, 3rd-place match (single elim only), league legs (1–2), draws allowed, points for win/draw/loss, group count, advance per group, grand-final reset.

5.4 Assign module admins

Module manage screen → **Admins**: search by username and add. Assigned people receive a notification. Remove them the same way.

6. Admin guide: entries and teams

Module must be **Draft** or **Open** to add/remove entries (the roster of a running module can only be withdrawn from).

6.1 Add an individual entry

1. Module page → **Entries** tab → **Add entry**.
2. Fill the form. Required fields are marked; phone/email are validated.
3. Optionally **link an app user** (profile picker, search by username). Linking enables notifications and the **Mine** filter.
4. Save.

6.2 Add a team / doubles entry

1. Entries tab → **Add team**. Enter the team name.
2. Add each member: name, entry-form answers (required fields are asked **per member**), optional linked profile, captain toggle, squad number.
3. Save. The whole roster is saved in one go; if something is wrong the message names the player ("Player 3: CMS ID is required.").

6.3 Edit, withdraw, delete

- **Edit**: tap an entry → Edit.
- **Delete**: only while the module is Draft/Open (before fixtures exist).
- **Withdraw**: once the module is running. A withdrawn entry stays in the bracket history; **you must record walkovers for its remaining matches** (see 8.3).

6.4 Uniqueness rules

Rule	Message
CMS ID unique within a module	An entry with this CMS ID already exists in this module.
A linked user can have only one entry per module	This user already has an entry in this module.
A CMS ID can be on only one team per module	A player with this CMS ID is already on a team in this module.
A linked user can be on only one team per module	This user is already on a team in this module.
Squad numbers unique within a team	Two players have the same squad number.
Team size	Too many: "more players than allowed"; too few at Seeding: "Some teams don't have enough players yet."
Max entries reached	This module is full.

Wrong entry type for module	This module's players don't match that entry type.

7. Admin guide: formats, seeding and generating fixtures

7.1 Move to Seeding

Module manage → set status **Seeding** (see checks in section 4). Entries are now frozen.

7.2 Seeding screen

1. Entries are shown mapped into an N-slot bracket (N = next power of two). The screen tells you how many **byes** there will be.
2. Reorder with the ↑ / ↓ buttons. **Shuffle unseeded** appears only while some entries have no saved seed.
3. **Save seeds**, then **Generate** (or **Regenerate** with a confirmation). If the order is unsaved, it is saved automatically before generating.
4. **Preview** the bracket. In seeding the draft bracket carries a banner.

> Standard seeding places seed 1 and 2 on opposite halves; byes go to the top seeds.

7.3 Format specifics

Single elimination — rounds named Round of N, Quarter-finals, Semi-finals, Final; 3rd-place match optional. Best-of per round editable in the **Rounds** screen.

League — fixtures built with the circle method (matchdays). With an odd number of entries one entry rests each matchday. Number of fixtures = legs × N(N−1)/2. Second leg swaps home/away.

Groups + knockout — entries are dealt into groups A, B, C… by **snake draw** (1→A, 2→B, …, then reversing). In seeding you can **move an entry to another group** (both groups must keep at least 2 entries; their fixtures are rebuilt).

Double elimination — winners bracket + losers bracket + grand final. Empty slots caused by byes are resolved automatically (“auto-byes”, shown as BYE). Unfilled slots display labels such as “Winner W2-1” / “Loser W1-3” until the match is decided.

7.4 Start the module

Once fixtures exist, set the module to **In progress**. The bracket is now locked: seeds and structure can no longer be changed. Players with linked profiles are notified of their matches.

> Moving back from Seeding to Open **deletes the generated bracket**. Reopening is only possible before the module is in progress.

8. Admin guide: running matches

Tap any match in the bracket or Matches tab to open the **match sheet**. Admins see action buttons at the bottom.

8.1 Schedule

Choose date/time, venue and court. Status becomes **Scheduled**; linked players are notified.

8.2 Enter a result

1. **Enter result** → mode **Played**.
2. **Racket sports** (table tennis, badminton, tennis, squash, pickleball): add a row per game with each side's points. Games-won is counted automatically and the winner follows.
3. **Team sports**: a single score row.
4. If the scores are level (league draws excepted) you must pick a winner (“Scores are level — pick the winner.”).
5. Save. The winner advances automatically to the next match; the loser drops to the losers bracket in double elimination. In leagues the table updates.

8.3 Walkover

Enter result → mode **Walkover** → pick the winner (a default note is pre-filled; edit it if needed).

> **Both entries must be present in the match.** A one-sided walkover is not allowed, because an undecided feeder match could later push an entry into an already-decided match. For a no-show, record the walkover on the match where the entrant faces an actual opponent.

8.4 Edit a result

Edit result on a played match. Editing a match whose downstream match is already played is blocked: *“The next match has already been played. Reset it first.”* Reset the later matches first, then correct this one.

8.5 Reset a match

Reset (with confirmation) clears the result and removes the advancement. Not possible if the next match has been played. In groups + knockout, group results lock once the knockout is built (“STAGE_LOCKED”).

8.6 Completion

The module **completes automatically**: when the final (and 3rd-place match) is decided in knockout formats; when every fixture is decided in a league; when the grand final (or reset) is decided in double

elimination. Final ranks and champions are then stored and shown, and entrants and admins are notified.

> A completed module cannot be edited in the app. If a wrong result was recorded, ask the owner to reopen it via SQL (section 14).

9. Groups + knockout: building the knockout stage

1. Play all group matches. The Groups tab shows each group's table.
2. When every group match is decided, the module page shows **Build knockout**. Before that the app says “Finish all group matches first.”
3. The **knockout builder** screen shows the qualifiers (top N of each group, labelled A1, B2…) in a suggested seed order. The suggestion orders by group position, then points, score difference, score for; and tries to avoid same-group meetings in round 1.
4. Reorder if you wish, then **Build**. A single-elimination stage 2 is created (3rd-place match if enabled). Group results become locked.
5. Made a mistake? **Reset knockout** — only possible while no knockout match has been played (byes are fine). It unlocks the groups again.

10. Standings, tiebreakers and final ranks

League / group table

Columns: played, W, D, L, score for/against, diff, points. Default points: win 3, draw 1, loss 0 (configurable in the module). Order of tiebreakers:

1. Points
2. Head-to-head
3. Score difference
4. Score for
5. Wins
6. Seed

Knockout final ranks

Champion 1, runner-up 2, third place if a 3rd-place match is played; other entries share ranks by the round they lost in (e.g. all quarter-final losers share T-5).

Double elimination

Champion 1, runner-up 2. Others by losers-bracket round of elimination: LB final loser 3rd, then 4th, T-5, T-7… (shared within a round).

Groups + knockout

Qualifiers rank by the knockout. Non-qualifiers rank after them, shared by group position (e.g. 4 groups, top 2 through: all 3rd-placed share T-9, 4th-placed T-13).

11. Notifications

Tournament notifications appear in the **Activity** tab (Past Activity, with a trophy icon) and as push notifications on the Android app. Tapping opens the relevant module or tournament. They are only sent while the tournament is **published** (except admin assignments).

When	Who gets it
You are made a tournament admin	The new admin
You are made a module admin	The new module admin
An entry linking you is added (or you are linked later)	The linked player / each linked team member
A match is scheduled	Linked players of both entries
A result is recorded	Linked players of both entries
A module completes	All entrants and module admins

Turn them off with the **tournament updates** preference; the master push toggle in Profile/Settings also applies. The web version cannot receive pushes.

12. All checks & error messages

Message	Cause	What to do
You don't have permission to do that.	Not an admin, or tournament completed/cancelled	Ask an admin / the owner
That isn't possible at this stage.	Action not allowed in current module status	Check the status table in section 4
<Field> is required. / looks invalid.	Missing or badly formatted entry-form value (player number prefix for teams)	Fix the named field
An entry with this CMS ID already exists in this module.	Duplicate CMS ID	Check for a double entry
This user already has an entry in this module.	Profile linked twice	Unlink or edit the existing entry
A field with this name already exists.	Duplicate custom field key	Use a different label
Core fields can't be removed.	Tried to delete Name/CMS ID/School/Phone/Email	Not allowed
This module is full.	Max entries reached	Raise the max or withdraw an entry
Not enough entries for this format yet.	Below the minimum for the format	Add entries
Too many entries for this format.	League >20, double elim >64, groups >8 per group	Split into modules / more groups
Some teams don't have enough players yet.	Roster below minimum	Complete the roster
This team has more players than allowed.	Roster above maximum	Remove a member
Two players have the same squad number.	Duplicate squad number	Change one
Scores are level — pick the winner.	Tied score in a format without draws	Choose the winner
The next match has already been played. Reset it first.	Editing/resetting with a played downstream match	Reset later matches first
Finish all group matches first.	Building knockout early	Complete group fixtures
The knockout has been built — group results are locked. Undo the knockout first.	Editing group results after stage 2 exists	Reset knockout stage
We couldn't find that.	Item deleted or not visible to you	Refresh

Something went wrong. Please try again.	Unexpected / network error	Retry; report if persistent

13. Checklists

Before publishing

- ☐ Tournament name, description, organisation, location, dates and cover image are correct
- ☐ Entry form reviewed: custom fields added, required/private flags set
- ☐ All modules created with the right sport, format and participant type
- ☐ Module admins assigned (and told to check the Activity tab)
- ☐ Test entry added and removed to check the form
- ☐ Status set to **Published**

Before seeding a module

- ☐ All entries added; no duplicates (CMS ID / user)
- ☐ Players linked to app profiles where possible
- ☐ Team rosters complete; captains and squad numbers set
- ☐ Entry count fits the format limits
- ☐ Format settings reviewed (best-of, legs, draws, points, groups, advance, grand-final reset)
- ☐ Status moved to Seeding

Before starting

- ☐ Seeds ordered and saved
- ☐ Fixtures generated and previewed; byes look right
- ☐ Rounds screen: best-of per round correct
- ☐ Module set to In progress
- ☐ Matches scheduled (time, venue, court)

Match day

- ☐ Confirm the correct match on the sheet before entering anything
- ☐ Enter game-by-game scores (racket sports)
- ☐ No-shows: record walkover on the match where the player has an opponent
- ☐ Verify the winner advanced in the bracket
- ☐ Mistakes: Reset downstream first, then edit

After a module / tournament

- ☐ Module shows Completed with champion, runner-up and ranks
- ☐ Champions strip is visible on the tournament page
- ☐ Ask the owner to set the tournament to Completed

14. Owner-only (SQL) tasks

Run in the Supabase SQL editor (service role). Full snippets: `docs/tournaments/owner-sql.md`.

- **Create a tournament** (`insert into public.tournaments ...`) — starts as `draft`; the 5 core entry fields are created automatically.
- **Add / remove a tournament admin** in `tournament_admins`.
- **Change status** with `update public.tournaments set status = 'published' | 'completed' | 'cancelled' | 'draft'`.
- **Reopen a finished module**: set the module status back to `in_progress` and clear champion/runner-up/third and each entry's `final_rank` if the final will be re-decided.
- **Delete a tournament** — irreversible; cascades to modules, entries and matches.

> Migrations 084–097 must be applied in order before the features work. The test scripts `sql-tests.sql` and `sql-tests-v2.sql` verify the database and roll back.

15. FAQ & limitations

Question	Answer
Can players register themselves?	No. Admins add every entry.
Can I create a tournament in the app?	No. The owner creates it via SQL.
Can the sport of a module be changed?	Treat it as fixed; create a new module instead.
Who sees my phone and email?	Only you (if linked) and admins. Private values are stripped on the server.
I'm not getting pushes	Check the master push toggle, the tournament updates preference, and that an admin linked your profile. The web app cannot receive pushes.
The bracket seems stale	Pull to refresh; check your connection.
Why can't I regenerate the bracket?	Only in Seeding status, and not after the module is In progress.

Not available (yet)

- Self-registration and tournament requests
- Swiss system; best third-placed qualification
- Per-match lineups and player statistics
- Tournament chat
- Community-hosted tournaments
