feature/module/action	description	expected result	actual result	status
streak popup	layout not correct			unresolved
shifting from sessions screen to some other screen	the shadows on session screen for the stats count of session show up between the transition and is more visible when the theme is light which isnt looking nice	they should not appear	appearing	unresolved
opening discover screen	sometimes the 2nd community overlaps the 1st community after animation			unresolved
opening a joined community	the posts are being appearing after the matches appear	the whole feed should appear at once		unresolved
writing a comment in post popup	the comment typing field gets covered by the keyboard			unresolved
writing a comment in post popup	the popup is not dragging down by gesture but only by holding the top small bar	it should be closed with animation by dragging the gesture on the whole component		unresolved
opening the pending match page	the animaton of the match card is not good			unresolved
Discover tab	it shows "No community found"	if there exist no community in for a specific category then the app should tempt the user to create one with a proper compelling message		unresolved
community page (clicking after community card)	if there is no post, it shows "Share your first moment"	whether make the current component clickable or ask the user to post		unresolved
opening a community screen	the post when bieng displayed shows a dark black shadow (light theme)	clear and smooth animations		unresolved
shifting to past activity tab in the activity page	go through the data fetching logic, if it waits for the response to come and then shifts the tab then do it the other way to make it feel fast and responsive			unresolved
editing a tournament (tournament admin)	clicking on the "select cover image", error message: Uncaught (in promise, id: 2) Error: Call to function 'ExponentImagePicker.launchImageLibraryAsync' has been rejected. → Caused by: java.lang.IllegalStateException: Attempting to launch an unregistered ActivityResultLauncher with contract expo.modules.imagepicker.contracts.ImageLibraryContract@7a6cada and input ImageLibraryContractOptions(options=expo.modules.imagepicker.ImagePickerOptions@fdf8709). You must ensure the ActivityResultLauncher is registered before calling launch()	open the image chosing dialogue		unresolved
when trying to save changes of the manage tournament screen	it says: Could not find the function public.update_tournament in the schema			unresolved
the info tab in the module page of the tournament	the info card animation has the same shadow issue when being shown			unresolved
when you open a module of a tournament	the page first opens in the entries tab mode.. and then shifts back to the bracket tab			unresolved

shifting from profile page to community page	the push notification shadow is being displayed during transition. fix it			unresolved
when you are not on a chat page	if you are not on a chat page, the chat count in the bottom navbar does not get updated,	a lightweight call is expected that just fetches if new message without fetching the content		unresolved

feature/module/action	description	status
discover communtiy screen	they are currently being shown in the order of being created (latest shown first), we will show them as popular first or something that is more interactive and appealing	unresolved
add tutorials in each screen/ per feature	in order to guide new users what even the feature is about	unresolved
when someone wins a module, implement notifications		unresolved
